

REQUIREMENTS FOR RESPONDING TO A NOTIFICATION OF A CHILD WITH AN ENVIRONMENTAL INTERVENTION BLOOD LEAD LEVEL

Verify the Information. Notification must be received from a medical health care provider. If the grantee receives information about a child under age six with an environmental intervention blood lead level from a non-medical health care provider, it must verify with a public health department or other health department that the child has an environmental intervention blood lead level. If so, this information constitutes notification by the grantee.

Conduct a Risk Assessment. The grantee must conduct a risk assessment of the unit in which the child lived at the time of the last blood lead test and common areas servicing that unit within 15 days of notification. They must also immediately provide the results of the risk assessment to the owner of the dwelling unit.

Note: Evaluation is completed when the risk assessment report is received.

Respond to the Evaluation Results. Within 30 days after receiving the risk assessment report, the owner of the dwelling must complete lead hazard reduction activities—interim controls or abatement—on identified lead-based paint hazards.

Note: Lead hazard reduction is completed when clearance is achieved.

Note: If interim controls, encapsulation, and/or enclosure are the methods used, the owner must conduct ongoing maintenance, and the grantee must continue periodic inspections.

Provide Notices. Notices of Lead Hazard Evaluation and Lead Hazard Reduction Activity must be provided or posted for the residents.
