

Chapter 5

Appraisals and Market Studies

5.1

General

Appraisals are required for all Section 232 applications with the exception of the 232/223(a)(7), 232/223(f)/223(a)(7), 223(d) and 232(i). Market studies must be included in all appraisals. The market study may at times be truncated under conditions outlined in Section 5.3.Q. The market study will be authored by the same person(s) who produced the appraisal and the conclusions carried throughout the appraisal report. In the past, appraisals and market studies were required to be separate documents. Now single reports are encouraged.

When an appraisal assignment involves complex or unusual valuation issues, the appraiser and/or the Lender should consult with the Office of Residential Care Facilities (ORCF) before beginning the assignment.

HUD expressly asserts its role as a regulatory enforcement agency as outlined in the confidentiality provision of the Uniform Standards of Professional Appraisal Practice (USPAP). Appraisers may be required to present their entire work file and fully disclose the identity and source of confidential information should HUD determine a review of the appraiser's work file is in order. All confidential information received either by initial request or by invoking the confidentiality provision of USPAP will be kept confidential by HUD, especially with regard to the "Freedom of Information Act." Any questions regarding the confidential information received will be directed to the originating appraiser for clarification.

When appraisals do not meet the program requirements as outlined in this chapter, the following remedies may be invoked:

1. Issuance of a warning letter to the lender or appraiser.
2. Limited Denial of Participation (LDP) of an individual or company.
3. Lender referred to the Mortgagee Review Board.
4. Appraiser referred to the state regulatory agency.

Chapter 2 of Section I – Handbook Introduction, addressing "Lender Relations," discusses remedies against lenders in more detail.

5.2

Selection of Appraisers

76

The Lender is responsible for the selection and approval of appraisers and familiarizing them with the 232 insurance program guidelines. Lenders must ensure that each appraiser selected is qualified to complete the assignment by reviewing their experience, education, work quality, relevant assignment frequency, and state licenses or certifications.

In order to qualify as the appraiser, the individual must meet all of the following conditions:

1. personally inspect the property being appraised on the date of valuation;
2. perform the analysis;
3. have the necessary knowledge and experience;
4. sign the appraisal certification as the appraiser; and
5. be a Certified General Appraiser under the appraiser certification requirements of the State in which the subject property is located, as of the effective date of the appraisal (temporary certifications are permissible). Lender verification of an appraiser's current standing can be done at <http://www.asc.gov>.

These requirements do not preclude an appraiser from relying on individuals that are not state-licensed or certified to provide professional assistance (such as an appraiser trainee or an employee doing market data research or data verification) in the development of the appraisal.

Further, the appraiser must meet all requirements of the competency rule of the USPAP. If more than one appraiser works on the appraisal, they are each required to sign the report and a certification outlining their involvement. The appraiser's signed certification must acknowledge the roles and extent of the professional assistance provided by others.

The appraiser must be independent of and may not be affiliated with the loan originator, broker, developer, borrower, lender, or any individual or institution involved in any other financial role in the application. The appraisal must be ordered and paid for by the Lender and not by the originator, broker, developer, or Borrower.

The appraisal must identify HUD as an authorized user of the report. The contract between the lender and appraiser will contain no language prohibiting contact between ORCF and the appraiser.

5.3

Appraisal Requirements (Statement of Work)

77

78

79

80

81

A. **USPAP Compliance:** The report must be in compliance with the USPAP. Any data contained in the appraisal report that is not the work of the appraiser and is from an outside source is to be cited. In addition to USPAP-required items, the report will contain the following deliverables:

1. Resume for each appraiser signing the report.
2. Copy of appraisal license or temporary permit for each appraiser signing the report.
3. Adequate photo documentation of the subject to allow a desk reviewer to get a sense of the quality, condition, and adequacy of the physical plant. In the case of new construction or substantial rehabilitation, exhibits such as floor plans, site plans, and elevations are to be included in addition to site photographs. The exhibits should be adequate to give the review appraiser a sense of what is planned. The report exhibits should be clear and readable. Plans may be incorporated into the appraisal report by reference (cite version or date), so long as said plans are supplied alongside the appraisal.

B. Timing: The effective date of the value estimate should be the date that the designated appraiser inspected the subject property. The date of valuation may not be a future date.

For 223(f) refinances, the appraisal is to be submitted to ORCF by the Lender within 180 days of the appraisal's effective date. For Expired appraisals reports, a new appraisal must be submitted must either be updated or granted a waiver through consultation with the ORCF review appraiser. Consult with ORCF to see if a re-inspection will be required.

For new construction, substantial rehabilitation, 241(a), and blended rate loans, the appraisal is to be submitted to ORCF by the Lender within 120 days of the appraisal's effective date. For Expired appraisals reports, a new appraisal must be submitted must either be updated or granted a waiver through consultation with the ORCF review appraiser. Consult with ORCF to see if a re-inspection will be required. The appraiser will indicate there is a hypothetical condition that the improvements have been completed and the forecasted occupancy levels have been achieved as of the appraisal date. In addition, the appraiser must indicate the timeframe necessary to achieve these projected results.

C. Purpose of the Appraisal and Definitions: The purpose of each appraisal is to provide the Lender and ORCF an estimate of the fee simple "Market Value of the Total Assets of the Business" (MVTAB) for the subject property. The report will be used by the Lender and ORCF in the underwriting of a FHA-insured mortgage.

The Lender will specifically inform the appraiser if the appraisal is for another purpose.

D. Definition of Market Value of the Total Assets of the Business (MVTAB): "The market value of all the tangible and intangible assets of a business as if sold in aggregate as in a going-concern" (*The Dictionary of Real Estate Appraisal, Fourth Edition, Appraisal Institute*). The appraiser is hereby instructed to exclude any business assets (such as holdings or investments, working capital, accounts receivable, and accounts payable) that are separate from the real estate. Implicit in this definition of the MVTAB is the definition of Market Value which is defined below.

Definition of Market Value: The most probable price that a property should bring in a competitive and open market under all conditions requisite to a fair sale, the buyer and seller each acting prudently, knowledgeably, and assuming the price is not affected by undue stimulus.

128 Implicit in this definition is the consummation of a sale as of a specified date and the passing of
129 title from seller to buyer under conditions whereby:

- 130 1. buyer and seller are typically motivated;
- 131
- 132 2. both parties are well informed or well advised, and each acting in what they consider their
133 own best interest;
- 134
- 135 3. a reasonable time is allowed for exposure in the open market;
- 136
- 137 4. payment is made in terms of cash in U. S. dollars or in terms of financial arrangements
138 comparable thereto; and
- 139
- 140 5. the price represents the normal consideration for the property sold unaffected by special or
141 creative financing or sales concessions by anyone associated with the sale.
- 142

143
144 *(Office of the Comptroller of the Currency, 12 CFR Part 34.42g)*
145

146 The MVTAB differs from a “Going-Concern Value” in that it assumes a sale (see definition
147 of market value above). The appraiser’s projection of income and expenses should include
148 any applicable resets of rates that would be triggered by a sale. These resets will vary from
149 one locality to another and may include a tax reassessment, or a reset of the Medicaid
150 reimbursement rates.

151
152 In developing the MVTAB, the appraiser is being asked to mimic the processes of the market
153 and estimate the most probable sales price of the going-concern. If the property is currently
154 under contract or has recently sold under normal arm’s length market conditions, any
155 departure from that price will be scrutinized. The assumption is that if the property has been
156 adequately exposed to the market, the purchase price is a strong indicator of the price the
157 market will bear.

- 158
- 159 E. **Extraordinary Assumptions:** Extraordinary Assumptions should be used infrequently and when
160 used, must be prominently outlined in the appraisal report.
- 161
- 162 F. **Jurisdictional Exceptions:** Jurisdictional exceptions should not be invoked and are not required
163 ~~into~~ order to comply with any instructions contained in this chapter.
- 164
- 165 G. **Hypothetical Conditions – 223(f):** Typically, the only Assumptions in a 223(f) appraisal should
166 be the completion of the proposed repairs/construction. On rare occasions, there may need to be
167 other assumptions, such as the execution of a proposed land lease. It is not appropriate to assume
168 stabilized operations if the property ~~in-reality~~ is not at stabilized-operations, without accounting
169 for the ~~impact on the valueeests~~ associated with reaching stabilization.
- 170

171 The valuation should not be based ~~upon~~ any significant change in occupancy, unit mix, bed
172 configuration, room rate increases, or expense reductions that ~~would~~ require an extended period
173 to implement. The appraised value should reflect the subject’s configuration and economics on

174 the date of appraisal, but with consideration to increases in income, occupancy, or decreases in
175 expenses; that could be implemented immediately by a typical buyer (but these changes must be
176 fully supported by the market and discussed in the appraisal). It is recognized that occupancy
177 levels can vary substantially from day-to-day, so while the occupancy of the facility on the date of
178 inspection should be considered, the focus should be on forecasting achievable occupancy for the
179 12-months following the date of value based upon the subject's historical occupancy, market area
180 dynamics, and anticipated changes in the market.

181
182 In cases where there are proposed repairs, the appraisal will conclude an "as completed" value,
183 making a hypothetical assumption that all proposed repairs are completed. The appraisal should
184 indicate the dollar amount of the repairs assumed and give a general overview of what items are
185 included. This is to ensure the consistency of the appraisal with the loan underwriting. The
186 completion of the repairs should be considered in determining rents, vacancy, expenses, and
187 depreciation; however these shifts in operations will likely occur over time. The appraisal should
188 not make the assumption that the new stabilized levels have been achieved. Instead, the value
189 should reflect what a typical buyer would pay for the current operations on the valuation date if
190 the repairs were finished.

191
192 ORCF may, at its discretion, allow a Lender to underwrite a 223(f) loan that assumes a shift in
193 operations or change in the number of units (as is done for new construction loans). In these
194 cases, the Lender will have the appraiser determine what the stabilized occupancy of the
195 reconfigured project will be once the repairs are completed. A "truncated" market study as
196 outlined in 5.3.Q will not be allowed. The appraiser will also supply an analysis of the cost to
197 reach new levels of operation, showing the forecasted monthly cash flows until stabilized
198 occupancy has been achieved. This analysis is required even if the monthly Net Operating
199 Income (NOI) never drops below \$0. Then the appraiser will conclude two values. The first is
200 the traditional value of the current operations assuming the repairs have been completed, as
201 outlined above. The second value will assume the repairs have been completed and the forecasted
202 stabilized occupancy has been achieved as of the appraisal date.

203
204 **H. Hypothetical Conditions – New Construction, Substantial-Rehabilitation, 241(a), and**
205 **Blended Rate:** For New Construction, Substantial Rehabilitation, 241(a), and Blended Rate
206 loans, the appraisal is to conclude an "As Completed and Stabilized Value", making a
207 hypothetical assumption that all improvements are completed and the appraiser's forecasted
208 occupancy has been achieved.

209
210 For all ORCF appraisals, income and expense conclusions are to be as of the effective date of the
211 appraisal and are not to be trended to the projected date of stabilization.

- 212
213 1. **Operating Deficits:** The Appraiser is to perform an operating deficit calculation when the
214 subject property is not currently able to achieve the NOIs forecasted in the appraisal. The
215 format of the IOD is dictated within the Initial Operating Deficit Escrow Calculation
216 Template (Form HUD- 91128-ORCF). More information on Operating Deficits can be
217 found in Production, Chapter 2.
218
219 2. **Additional Instructions:** When portions of a project already exist (i.e., Section 241(a),

220 substantial rehabilitation, and blended rate loans), the appraiser will also provide an “As
221 Is” Market Value of the Total Assets of the Business. The “As Is” MVTAB should not
222 assume repairs are completed. Do not make a hypothetical assumption that the subject is
223 operating at stabilized occupancy if it is not.
224

225 I. **Regional Description:** This section should describe the region (typically the U.S. Census-
226 defined Metropolitan Statistical Area- MSA when in urban and suburban areas) relevant to the
227 property, and should include:
228

- 229 1. An overview of recent and forecasted population and household growth;
- 230
- 231 2. A description of the economic base of the area including recent and forecasted job growth
232 statistics, stability of local industries, major employers, and current and historical
233 unemployment levels.
234

235 J. **Neighborhood Description:** In discussing the neighborhood, the appraiser should include the
236 following:
237

- 238 1. A general discussion of the neighborhood’s demographics, new development, economic
239 and employment trends, and a summary of the neighborhood’s relevant strengths and
240 weaknesses, and their influence on the desirability and remaining economic life of the
241 subject.
242
- 243 2. A description of neighborhood land uses in general, including predominant age, quality,
244 and condition of the properties, and their influence on the subject.
245

246 K. **Site Description:** In the analysis and description of the site the appraiser should:
247

- 248 1. Include a reference to the panel number and date of the FEMA map reviewed and if the
249 site is partially or fully within a designated Special Flood Hazard Area. Be careful to
250 differentiate between Zone X and Shaded Zone X flood hazard areas.
251
- 252 2. Obtain a copy of the land survey from the lender and discuss the effect of easements,
253 encroachments or encumbrances on the subject site.
254
- 255 3. Identify the immediately adjacent land uses in all directions and indicate if they have a
256 negative impact on the site.
257
- 258 4. Indicate the number and adequacy of parking stalls on site, and if off-site parking is
259 utilized.
260

261 L. **Zoning and Conformance:** The appraiser should identify the zoning code. Zoning requirements
262 concerning density, unit size, parking, etc., should be analyzed for the subject property. A
263 statement should be made as to whether the property is a legal-conforming, legal non-conforming,
264 or an illegal use, and include the issues of non-conformance, if applicable. This need not be
265 original research on the part of the appraiser, since the Lender will be supplying their own

266 evidence of zoning compliance with their application.

267
268 **M. Improvement Description:** The appraiser is to provide a description of existing and any planned
269 improvements. This section should include the estimate of total building area. Include
270 descriptions of living areas, patient areas, nursing or therapy units, common areas shared by
271 residents and support areas. Include an inventory of room type (private, semi-private and ward)
272 or unit mix as well as a description of their restroom and bathing accommodations.

273
274 Color photos should generally include, but not be limited to, site access, common areas, nurse's
275 stations, hallways, rehab space, parking, building exteriors, and interior views of typical units.

276
277 Note: Although it is recognized to be outside their area of expertise, the appraiser is encouraged
278 to note any violations of building, health, fire, or safety codes that were suspected at the property.
279 ORCF understands the appraiser is not an accessibility expert; however, if an accessibility issue is
280 obvious, a detailed description (inclusive of pictures) should be provided.

281
282 **Advisory Note:** When analyzing properties that do not have all the necessary facilities or services
283 on-site or that share such functions with an adjoining or affiliated facility, the appraisal must not
284 assume that the current sharing agreements will continue. By way of example, such shared
285 facilities might provide for dining and food services, laundry, treatment space, management,
286 parking, maintenance, etc. The appraisal must recognize the property as an operation with
287 deficiencies. For appraisal purposes a provider of a missing service can be considered an off-site
288 vendor and apply market expenses to that service, not recognizing any below-market expenses
289 granted for existing relationships. The cost of supplying missing services must be clearly defined
290 in the appraisal report. It is noted that off-site costs are typically higher than the costs for similar
291 services with all in-house operations. If the appraisal assumes an off-site vendor the
292 capitalization rate should also consider the reduced ability to control expenses or other related
293 risks. The appraisal may hypothetically assume that deficiencies are cured if the cost of
294 renovations and or additions required to provide those services have been accounted for in the
295 valuation. Such assumptions are limited to physical and legal restrictions. Assumptions about
296 construction need to account for any lost income from the change in operations and for time and
297 vacancy needed to implement the change. At that point the expense to operate an in-house good
298 or service should be abstracted from similar facilities with in-house operations.

299
300 **N. Remaining Economic Life:** The appraiser will estimate the remaining economic life of the
301 improvements. Remaining Economic Life is defined as: *“The estimated period during which*
302 *improvements will continue to represent the highest and best use of the property; an estimate of*
303 *the number of years remaining in the economic life of the structure or structural components as of*
304 *the date of the appraisal; used in the economic age-life method of estimating depreciation.”¹*

305 Because Section 232 property types have few alternative uses, the remaining economic life will
306 generally be synonymous with the remaining useful life, which is the amount of time remaining in
307 which the building will be used for its intended use.

308

¹ The Dictionary of Real Estate Appraisal, 5th Edition, Appraisal Institute

309 The analysis should discuss the following three types of depreciation: physical deterioration,
310 functional obsolescence, and economic or external obsolescence.

- 311
- 312 1. **Physical Deterioration.** In determining the remaining economic life, the appraiser will
313 include an estimated economic life and effective age. At a minimum, the economic life
314 estimate from the Marshall & Swift Cost Estimating Manual or equivalent should be
315 quoted. Other published life estimates may also be quoted when available. While HUD
316 will require a reserve account to continually maintain the building, the appraisal should
317 not assume any specific type of ownership or financing when determining the probable
318 life. Maintenance done in the past may ~~of course~~ be considered in determining the
319 effective age, but assumptions about future maintenance should be tied to the amount of
320 repairs that can be funded with the “market” reserve expense concluded in the appraiser’s
321 income approach.
- 322
- 323 2. **Functional Obsolescence.** ~~Typical H~~ives can be extended or shortened based on the
324 presence or absence of functional obsolescence as compared to other facilities in the
325 subject’s market. For nursing facilities, these comparisons may include the number of
326 private rooms compared to semi-private or wards, shared toilets/showers, quality and
327 location of therapy space, size of common areas, corridor width, etc. For assisted living
328 facilities, the comparisons alternately might focus on building amenities, common space,
329 and room configurations.
- 330
- 331 3. **External or Economic Obsolescence.** Again, lives can be extended or shortened based
332 external factors. Items to consider here may include but are not limited to long term
333 population trends, stage of neighborhood life cycle, type of license and certifications, the
334 likelihood of new competition, whether supply is controlled by State Certificates of Need
335 (~~CON~~), the subject’s relative competitive position in the market, hospital referrals,
336 Medicaid reimbursement issues, alternate highest and best uses, etc.
- 337
- 338 O. **On-Site Services.** The appraiser is to provide a detailed description of the services and personal
339 care levels to be provided by the subject project, including but not limited to the number of meals,
340 housekeeping, laundry facilities, ~~assistance with activities of daily living (ADLs)~~, transportation,
341 activities, therapies, ~~assistance with activities of daily living (ADLs)~~, etc. For multiple use
342 facilities, the services offered or available for each resident group (e.g., board and care, assisted
343 living, dementia, skilled nursing) should be segregated in the narrative.
- 344
- 345 P. **Highest and Best Use.** The Highest and Best Use is to be developed according to USPAP. It is
346 to include both the highest and best use “as vacant” and “as improved.” Properties are to be
347 appraised based on their highest and best use. Usually this use will be the same as the intended
348 use of the property; however, when there is a conflict between the two the Lender or appraiser
349 should approach ORCF for guidance on how to approach the valuation for their particular
350 circumstances.
- 351
- 352 Q. **Market Analysis.** For New Construction, Sub-Rehab, 241(a), and Blended Rate, a complete
353 market study must be part of the appraisal. Appraisals for 223(f) refinances may supply a
354 “truncated market analysis” if the project meets specific criteria. The case for submitting a

355 truncated analysis should be presented in sufficient detail for the ORCF reviewer to arrive at the
356 same conclusions.

357
358 1. A truncated market study is allowed if:

359
360 a. The property is not adding beds/units and no substantial shift in the subject's
361 census mix has been assumed.

362
363 At the time of the appraisal the property is operating at and is expected to continue
364 operating at its estimated stabilized occupancy into the foreseeable future.

365
366 b. There are no anticipated or foreseeable increases in supply that will significantly
367 alter the subject's competitive position or performance.

368
369 c. There are no anticipated decreases in demand in the foreseeable future for the type
370 of services offered at the subject.

371
372 2. —With a truncated analysis it is not necessary to quantify (put a number to) the current
373 demand level or "unmet need" in the primary market area. A truncated market analysis
374 will include the following:

375
376 a. A definition of who is the subject's target market(s).

377
378 b. A definition and explanation of the Primary Market Area (PMA) including a
379 discussion of geographic, demographic, and economic influences on and
380 characteristics of the target market. Include a map showing the boundaries of the
381 PMA.

382
383 c. A description of the primary competition within the market area. Report each
384 competitor's name, location, year built, and number of units/beds. If available,
385 also report on unit type/sizes, payor mix, private pay bed/room rates, any
386 significant shift in rates within the recent past, vacancy, recreational facilities and
387 other amenities, condition of improvements, additional fees for personal care
388 levels and/or second occupants, etc.

389
390 d. A description of the local research into proposed construction or expansion of
391 competitive facilities. For States that require certificates of need (CON), or its
392 equivalent, the state agency should be contacted to determine the current and
393 future intentions for granting additional beds or units in the primary market area
394 that would represent additional competition.

395
396
397 3. Whenever truncated studies are not appropriate, a complete market analysis that conforms
398 to the following rules must be included in the appraisal.

400 | **a. Define the Primary Market Area (PMA).** PMA in this document is defined as
401 | “the area that a majority of the project’s demand will be drawn from considering
402 | physical barriers, psychological barriers, density of population, linkages, and the
403 | location of competing facilities.
404 |

405 | **Advisory note:** The need to be nearby friends, family, physician, church, among
406 | other familiar services is a primary determinant for the selection of most senior
407 | housing and nursing facilities. Typically, 60 to 80 percent of the demand for
408 | senior housing and / or a nursing facility will come from the PMA. The analyst
409 | should study the market and determine natural boundaries, social or economic
410 | boundaries as well as other factors that generally define the PMA. The analyst
411 | should also determine if nearby areas have sufficient supply and would not be a
412 | significant area to draw potential patients. Certain services that the subject may
413 | offer may also extend the PMA due to the lack of services in that area, therefore,
414 | the services the subject may offer should also be considered.
415 |

416 | Market area analysis for long term care and seniors housing should focus not only
417 | upon seniors but also upon adult children who may be caregivers for an elderly
418 | person residing outside the market area.” When defining the boundary of a market
419 | area, the analyst ~~must~~should include:

- 420 | i. A description and map of the geographic boundaries of the subject’s
421 | market area and a discussion of any physical or psychological barriers of
422 | the primary market area.
- 423 | ii. The locations and a map showing all facilities (supply) of comparable and
424 | competitive facilities that offers the same care as the subject facility (IL,
425 | AL, MC, SN, etc.) must be provided for the primary market area as well as
426 | for adjacent secondary market areas where a competitor’s PMA overlaps
427 | the subject’s PMA (existing, under construction, and planned).
- 428 | iii. ~~A~~a general description of the localities from which the occupants in
429 | competing projects originate, if available. If the subject is an existing
430 | project with a proposed addition or a replacement project, a resident origin
431 | analysis should be performed. The resident origin analysis must consider
432 | both where the resident resided prior to entry in addition to the location of
433 | the adult child or family member to account for residents moving to be
434 | nearby adult children/family. It is the combination of these two population
435 | groups and where they reside that determines the primary market area.
436 | iv. Location of significant referral sources.

437 |
438 | **a.b. Define the Target Resident.** The report ~~must~~should include a qualitative
439 | description of the target residents and the type of housing and care offered by the
440 | subject. Include the economic and demographic characteristics of the target
441 | market (subject residents): income levels, wealth and assets, ~~household size~~, age,
442 | physical and/or mental limitations, and other similar factors.
443 |

444 | **Advisory Note – The economic and demographic focus for the target market may**
445 | be different for assisted living than for memory care or skilled nursing facility.

446 For example, income, wealth and assets are more important for private pay assisted
447 living than for skilled nursing for which Medicare and/or Medicaid are the primary
448 payor.

449
450 c. Describe the Current Inventory and Supply Count. While all facilities offering
451 the same type of care as the subject will be mapped as described above, only those
452 competing for the same Target Resident as the subject facility need to be identified
453 as competitive supply. These direct competitors are to be used in forecasting
454 unmet or displaced demand, rates, occupancy, resident/patient mix etc. Any
455 beds/units identified in the PMA, but not included in the competitive supply must
456 describe the reasons why they will not compete directly with the subject facility
457 for the same Target Resident.

458
459 i. A datasheet for each of the subject's primary competitors is to ~~be presented~~
460 ~~including~~ the following information:

461 1. Project name, location, number of unit/beds.

462 2. Operated beds versus licensed beds. Operated beds are those beds
463 that are actually available and set up for immediate occupancy.
464 Many nursing homes and assisted living facilities do not operate all
465 of their licensed beds. A description of why the number of operated
466 beds versus licensed beds should be provided.

467 2.3. Private pay rates by unit type, and level of services. Provide
468 information on the base rate and any added costs for optional
469 services, as applicable.

470 3.4. Typical census mix by payor source (i.e. private pay, Medicare,
471 Medicaid, HMO, VA, etc.).

472 4.5. Age and condition of the competing project, with consideration of
473 aspects that may be substandard or obsolete in terms of physical
474 plant, services, amenities, etc.

475 5.6. Occupancy rates – indicate if the occupancy percentage is for a
476 point in time or the average for the year.

477 6.7. Existence or extent of concessions.

478 7.8. The level of competitiveness in comparison to the subject should be
479 discussed.

480 8.9. Photographs ~~should be provided~~ ~~are encouraged~~.

481 9.10. Contact information for the person who supplied the data. The
482 administrator/executive director/marketing director should be
483 interviewed for each primary competitor as part of the confirmation
484 process.

485
486 ii. In addition to the datasheets presented for the primary competitors, the
487 following information is to be presented.

488 1. Describe any off-line product.

489 2. Give the total number of beds/units (of the types housed within the
490 subject) in the PMA, by type of care.

- 3. Description of turnover rates (length of resident stays) within the PMA.
- 4. Supply an occupancy survey for the PMA of the product type offered by the subject. Include an explanation of any vacancy or absorption problems in the market. Supply any information gathered on waiting lists.
- 5. Describe the absorption experience of any recently completed projects, discussing the level and extent of pre-sales, move-ins, move-outs, and net absorption.

b-d. Rate Determination. This may be done within the market analysis section or the income approach section. The analysis should contain a determination of the appropriate rates for the subject. Differences in pricing strategies should be accounted for. For example, some facilities may charge lower base shelter fees with higher care fees, while others will quote higher shelter fees with lower care fees. The rate conclusions for the subject must show a consistent pricing strategy between shelter and care charges.

The report should also include, as applicable, a discussion of the current levels of public payments by the State relative to the typical “private pay” rate for the same level of shelter, care, and services.

e-e. Alternative Care and Service Systems. The demand analysis should discuss the impact of other care and housing options that cater to the same target populations as the subject. These may include: home healthcare, continuing care retirement communities (CCRCs), assisted living facilities (ALFs), board and care facilities, congregate care facilities, retirement service centers, independent living facilities, nursing facilities, etc.

d-f. Characteristics of Pipeline Activity. The following information should be provided in the report for each project in the construction pipeline or planning process:

- i. Total number of beds currently under construction or proposed, by unit size or type of accommodation. Provide the projected rates if known. If proposed, what is the likelihood of being developed.
- ii. Typical types of services to be offered.
- iii. Provide contact information for data source.

e-g. Licensing and Certificate of Need. For intermediate and skilled nursing facilities, provide a narrative discussion and description of the licensing and Certificate of Need requirements and processes or any moratoriums imposed by the State in which the project is to be located. The discussion should focus on any required or recommended demand or need models and any other specific licensing requirements that would impact demand for the proposed project. Where CON requirements significantly curtail the building of new facilities, the appraiser will describe the state’s rules relating to “transfer” of CON beds (e.g., must the transfer

537 be within the same county? Must the transfer be from an over-bedded county to an
538 under-bedded county? If data is discovered, what are typical arms-length unit
539 prices for these transactions?).

540
541 Certificate of Need restrictions, moratoriums on new development, and in
542 particular licensed supply versus operated supply, must be considered when
543 forecasting unmet or displaced demand in the PMA.

544
545 f.h. Demand Estimate and Analysis. The market study report should:

- 546
547 i. Estimate the unmet or displaced demand, or oversupply for the unit type(s)
548 offered by the subject. Unmet demand is excess demand currently not
549 being met for the Target Resident for the service (assisted living, memory
550 care, skilled nursing, custodial nursing care, independent living etc.) being
551 provided by the subject facility. Displaced demand is existing demand that
552 is being displaced because the quality of the location, physical plant or
553 services (assisted living, memory care, skilled nursing, custodial nursing
554 care, independent living etc.) of the existing supply are not adequate to
555 meet the needs of the Target Resident/Patient demand segment.

556
557 Rather than only comparing the subject's saturation rate to the rates of
558 other markets, the market study should quantify the demand in numbers of
559 units/beds. The unmet demand should be determined for the current
560 market and include a forecasted demand for five years in the future. The
561 demand estimate should show the number of units/beds by payor source
562 (private pay, Medicare, Medicaid, etc.). For independent living, assisted
563 living or memory care, the demand estimate ~~must~~ should be based on the
564 number of prospective Target Residents/Patients meeting the relevant
565 economic and demographic criteria (sufficient incomes, age, ~~household~~
566 size, etc.) that reasonably would be expected to require the level of care
567 provided at the subject. As discussed subsequently, a demand estimate for
568 nursing homes would rarely be based on demographic criteria such as
569 sufficient incomes, age, etc., but would be based on need by type of
570 insurance such as Medicare, Medicaid managed care or commercial
571 insurance. Supply or a portion of a unit at a competitor that does not
572 compete for the Target Resident/Patient population should be excluded as
573 competitive units as part of the unmet or displaced demand calculation.

- 574
575 1. The demand analysis and forecast for senior housing (assisted
576 living, memory care, group homes, independent living etc.) report
577 should include:

- 578 a. Current and forecasted population of the target group(s) by
579 age cohort and the proportion of the market population each
580 group comprises.
581 b. Current and forecasted estimates of for the primary Target
582 Resident group to be served by of social, physiological,

- 583 | psychological ~~characteristics (i.e., the extent and type of~~
584 | limitations that require intermediate or skilled care).
- 585 | c. Current income band of prospective Target R residents
586 | ~~comprising~~ demand segment, including rent to income ratio
587 | analysis, if necessary.
- 588 | d. Discuss the impact of anticipated population changes on the
589 | demand for this project.
- 590 | e. Discuss changes in the population (including migration
591 | patterns) of adult children of the frail elderly, if applicable.

592 |
593 | Advisory note: The impact of inward and outward
594 | migration of seniors for a PMA tied to adult children
595 | should already be part of the demographic forecasts from
596 | the U.S. Census Bureau or other demographic forecasting
597 | services. However, cases do arise whereby the influence
598 | of the adult children is not fully measured in the
599 | demographic forecasts provided by the U.S. Census
600 | Bureau or leading demographic companies. Any
601 | adjustments tied to the influence of adult children to the
602 | demographics provided by the U.S. Census Bureau or
603 | other leading demographic companies used to estimate
604 | the demand for the Target Resident/Patient should be
605 | clearly supported. This does not include an adjustment
606 | for secondary market (peripheral) demand.

- 607 |
608 | e.f. Indicate the proportion of secondary demand expected to
609 | come from outside of the PMA. Secondary demand should
610 | not be confused with the impact on demand tied to the
611 | influence of adult children or family members. Secondary
612 | demand is the portion of the demand that cannot be directly
613 | tied to the influence of primary market area. Use care
614 | not to double count in-migration tied to the influence of
615 | adult children with the percentage coming from outside the
616 | PMA, as those residents/patients are usually accounted for
617 | in the population estimates used in the primary demand
618 | calculation.

619 | f.g. Include demographic data sheets in the addendum.

620 | 2. The demand analysis and forecast for nursing facilities should
621 | include:

- 622 | a. Current and forecasted population of the target group(s) by
623 | age cohort and the proportion of the population each group
624 | comprises.
- 625 | b. Current and forecasted estimates for the Target
626 | Resident/patient group of social, physiological,

627

666
667
668
669
670

psychological limitations that require intermediate or skilled care.

c. If a significant portion of the Target Resident/patient census mix is private pay or Medicaid, include an income range for the prospective Target Resident/patient demand segment, including rent to income ratio analysis.

***Advisory note: The demand estimate for nursing homes would rarely be based on demographic criteria such as sufficient incomes, age, home price, etc., but should be based on need by type of insurance such as Medicare, Medicaid, managed care, or commercial insurance. Due to the high cost of stays, private-pay demand for nursing homes is often comprised of patients with short term assets that will eventually be depleted resulting in these residents converting to Medicaid in the future.

d. Discuss the impact of anticipated population changes on the demand for this project.

e. Discuss changes in the population (including migration patterns) of adult children of the frail elderly, if applicable.

f. The demand forecast for specialized residential medical services may need to be based on the number of skilled nursing discharges from those hospitals serving the primary market area.

ii. Include an estimate of the absorption period needed for the project to reach sustaining occupancy. The absorption estimate should be tied to the analysis of demand, not just the historical experience of comparable buildings.

iii. When the supply is compared to demand it is acceptable to account for enough vacancy for the market to operate fluidly. Since the point of a supply analysis is to quantify the capacity of the existing inventory; it is not appropriate to discount the supply count for vacancies beyond ~~5%~~ a basic frictional vacancy. Frictional vacancy is defined as the minimum vacancy needed for a market to operate in an orderly fashion.

iv. Because the focus of the supply count should be on capacity, the market study will discuss the existence and impact of any off-line product in the PMA. An off-line unit is one that is not being operated because of lack of market demand for the unit. Facilities that are licensed for more beds than they operate may or may not count as off-line units, depending on the reason for operating fewer beds.

i. Data, Estimates, and Forecasts. The analysis should document the methods and techniques used to develop all estimates and forecasts; and provide adequate

671 citations on the sources of all data, estimates, and forecasts. The data and
672 estimates provided should be relevant and current.

673 The demand model utilized by the appraiser or market analyst must be supported
674 by t~~The use of~~ case studies demonstrating the relevance of the demand model for
675 estimating unmet or displaced demand regardless if the demand methodology is
676 based on published model or it was independently developed by the appraiser or
677 market study analyst. to derive utilization rates is encouraged. If instead,
678 published rates (utilization/saturation/penetration) are used to infer demand,
679 explain in detail how the rate was derived and follow the same methodology, when
680 applying the factor to the subject market.
681

682
683 **g.j. Low Income Housing Tax Credits (LIHTC).** For LIHTC projects, the market
684 study is to provide an estimate of demand, based on potential income-eligible
685 resident. In many states income eligibility is satisfied when a resident is defined as
686 income-eligible under Medicaid. Otherwise, an income-eligible resident is one
687 whose income does not exceed the maximum permitted by the affordability
688 restrictions but who has sufficient minimum income to pay the LIHTC rent
689 without being overburdened by the amount of the restricted rent. Some LIHTC
690 projects have other forms of assistance (such as Section 8 rental assistance or soft
691 subordinate financing) to further reduce rents and thus expand the number of
692 income-eligible tenants.

693
694 **R. Valuation.** The appraisal should establish the subject's market value supported by the
695 reconciliation of the income approach, the sales comparison approach, and cost approach (if
696 applicable).

697
698 **1. Land Valuation.** In cases where no cost approach is developed, the appraiser is not
699 required to estimate the value of the land.

700
701 The appraiser will base their land value on the highest and best use as if vacant. A
702 minimum of three comparable sales should be used. The appraiser should ensure that the
703 comparable transactions were arm's-length between buyer and seller and indicate how the
704 sales data was verified. An explanation of the adjustments should be given in the
705 narrative. If there is a recent or pending sale of the subject land, the sales price must be
706 analyzed. This is a USPAP requirement.

707
708 For guidance on appraising properties involving ground leases, refer to Section 5.4.

709
710 For New Construction, Substantial-Rehabilitation, 241(a), and Blended Rate loans, the
711 appraiser will also supply the "Market Value of the Site Fully Improved". This is a HUD-
712 specific value that is defined in HUD Handbook 4465.1. The "Market Value of the Site
713 Fully Improved" essentially assumes the site is ready for development and specifically
714 that:

715
716 a. All necessary utilities are available to the site.

- b. Any environmental conditions needing to be corrected prior to construction have been resolved.
- c. Any required demolition has occurred.
- d. There are no unusual site costs or that the conditions leading to such costs have been corrected.
- e. All off-site improvements have been completed.

The extra costs associated with these site conditions need to be kept separate from the land value for correct loan sizing on Form HUD-92264a-ORCF. The “Market Value of the Site Fully Improved” is a HUD-specific value used in the derivation of the HUD replacement cost of the project. A conventional market value of the site as if vacant must also be derived by the appraiser when developing a cost approach, in order to keep that value strictly a market value, not a HUD-specific value. In cases where all of the above stated assumptions are already true, there may be no difference between the “Market Value of the Site Fully Improved” and the site value as if vacant prepared in the normal non-HUD way.

2. **2.—Cost Approach to Valuation.** The Cost Approach is typically more relevant in the case of new construction or recently completed properties. This approach may be eliminated with older properties when not a reliable indicator of value; however, a narrative justification of its elimination is required. ORCF requires this approach when the actual or effective age of the facility is 5 years or less and whenever the appraiser believes this approach is applicable and relevant to producing a credible appraisal report.

ORCF will expect to see a fully developed cost approach in cases where there is little depreciation or in cases where the undepreciated replacement cost new would be expected to be lower than the conclusions of the Sales Comparison or Income Capitalization Approaches. For that reason, base costs of new facilities will need to be carefully discussed in the narrative justification for excluding the approach.

When developing a Cost Approach, the appraiser will prepare an independent estimate using comparable data and industry publications (e.g., Marshall and Swift) and conclude to the total cost for all improvements and major movable equipment. In order to arrive at the MVTAB, absorption, staffing costs, other intangible start-up operating costs, occupancy costs, and entrepreneurial profit should be considered and identified. The entrepreneurial profit should be an amount sufficient to attract a typical owner/investor to develop a project versus purchasing a stabilized project. Disparity between the conclusions of the cost approach and the other approaches should be discussed and reconciled as it relates to the principle of substitution.

All applicable forms of depreciation (also applies to major movable equipment) are to be considered. The final cost approach estimate is to assume completion of all required and proposed repairs included in the financing.

3. **3.—Sales Comparison Approach to Valuation.** In obtaining sales data for the Sales Comparison Approach, the appraiser should verify the data with a party involved in the

763 transaction (this source should be cited) and confirm that the transactions were arm's-
764 length between buyer and seller. The appraiser should visit all improved sale comparables
765 when in the subject's statistical market area. Photographs should be provided of the
766 comparables that were inspected. For those comparables which the appraiser was not able
767 to visit, inclusion of second party or published photos is permitted, and preferred to
768 omitting a photo entirely. The source of the second party photographs should be cited.
769

770 The sales comparison should be formulated based upon those sales which are most
771 relevant and meaningful. The scope of the appraisal should include a complete
772 description of the comparable search. If the sales that are utilized require substantial
773 adjustments the appraiser must provide an explanation why the sales utilized are
774 appropriate. Although the market for the property type appraised may be regional or
775 national in scope, if there have been recent sales in the area and those sales were not
776 utilized for comparative purposes ~~an~~and explanation of why the more proximate sales
777 were not utilized is needed. All adjustments of the sales should be justified in the
778 narrative report. The value of any excess land should be deducted from the comparable
779 transaction sales price (if applicable). Contact information for sales comparable data
780 should be given.
781

782 When economic indicators such as income, expense, vacancy, cap rate, etc., are quoted
783 from a sales comparable, the source of the data, whether it be from the buyer, seller, the
784 appraiser's estimate, third-party estimate, etc., should be stated. Whether the income was
785 historical or prospective in nature should also be disclosed. Also, state if the expense
786 information is inclusive of management fees and reserve for replacement deposits, to be
787 consistent with the subject's income forecasts.
788

789 If the sales price includes consideration for accounts receivable, retained earnings, or
790 intangible assets that may be sold off by the buyer without affecting the going concern,
791 then the value of those assets should be deducted from the purchase price.
792

793 Sales of leased fee and partial interests should not be used as comparables in the Sales
794 Comparison Approach unless they can be reasonably adjusted for differences in the
795 interest being sold, nor should they be used in the derivation of market-extracted
796 capitalization rates.
797

798 Sales that are part of a small group transaction or portfolio are discouraged but may be
799 used if:

- 800 a. At least one of the facilities in the portfolio is within the same state as the subject,
- 801 b. Adjustments are made for premiums or discounts associated with the "bulk" sale,
802 and
- 803 c. The price allocation of each facility is verified. Details of the aggregate sale, with
804 unit price indicators should also be given.
805

806 The larger the portfolio the less the sale can be relied on for comparison to a single
807 project. Reliance on a majority of portfolio comparables will not be acceptable.
808

809 If the appraiser wishes to use an NOI adjustment in the sales comparison approach,
810 the guidance in this paragraph is to be followed. Using an NOI adjustment in the
811 Sales Comparison Approach is a way to adjust for all differences between
812 properties with one adjustment. In theory, all differences between two properties
813 will be reflected in the different NOIs the projects can generate. The use of an
814 NOI adjustment exclusively will largely replicate the results of the income
815 approach in the sales comparison approach. The danger is that the sales
816 comparison approach cannot function as a check, as any mistakes in the income
817 approach will be passed through to the sales comparison approach. In order to
818 preserve the independence of the sales comparison approach, an NOI adjustment
819 can be utilized as additional support for the conclusion but not to the exclusion of a
820 fundamental analysis of the unit price. ~~the appraiser is to perform two separate~~
821 ~~analyses in cases where the NOI adjustment is employed. One analysis will adjust~~
822 ~~the comparables by differences in NOI. The second analysis will adjust the~~
823 ~~comparables by all characteristics (location, age, size, etc.) except differences in~~
824 ~~the forecasted NOIs. The two analyses will then be reconciled into one conclusion.~~

825
826 The price per bed is a common unit of comparison utilized in the sales comparison
827 of skilled nursing facilities. In addition to the price per bed comparison, the
828 appraiser should also analyze the “price per patient room.” The price per bed can
829 be misleading at times because the rooms can be shared or private, depending on
830 the marketing strategy of the Borrower. This requirement is meant to prevent a
831 bed value derived from private rooms being applied to semi-private or ward beds,
832 resulting in an incorrect valuation.

833
834 If there is a recent or pending sale of the subject, the sales price must be analyzed.
835 If the property has sold within 3 years, or within the date range of the comparable
836 sales, the price per unit/bed, capitalization rate, marketing time and market
837 exposure must be provided.

838
839 **4. 4.—Income Approach to Value.** The income capitalization approach to value is often the
840 most significant indicator of value for properties purchased for their cash flow.

841
842 The scope of the appraisal should include a complete description of the comparable search
843 and data gathering process. The appraiser is to inspect and provide a photo of all ~~income~~
844 comparables utilized to forecast rents, census mix or occupancy for the subject facility.

845
846 The appraisal will provide a detailed description of the subject’s reimbursement structure
847 or payment sources. In projecting all sources of income for the subject property,
848 consideration should be given to foreseeable changes in competitive market conditions
849 that will affect current occupancy, payer mix, and rate levels. Examples include changes
850 in: the condition of state finances, state laws offering alternative forms of housing types,
851 reimbursement structures, and competitors in the marketplace.

852
853 For existing operations, an analysis of the subject’s income, expense, and census mix (by
854 payer source) for the year-to-date and the last three fiscal years should be provided and

855 analyzed.

856 The analysis should provide a discussion of any foreseeable changes in reimbursement.

857 **Advisory Note:** For example, if the capital cost component of a project's Medicaid
858 reimbursement will diminish over a 10-year period as the capital is depreciated, this would
859 need to be considered when setting the reimbursement rate and accounted for in the
860 capitalization processes of that income. This ~~may would~~ also lead to the inclusion of a sinking
861 fund. See Production, Chapter 2.5 GG.
862
863
864

865 **Advisory Note:** Revenue and expenses should always be estimated based on market
866 expectations as a stand-alone facility of that particular asset type and class. For example, if an
867 operator owns several small facilities in a market sharing an administrator between two or
868 more facilities, this expense should be adjusted to market as a stand-alone facility, which
869 means one administrator to one building. However, this does not mean that if the subject is a
870 regional or national asset class that economies of scale such as purchasing power or marketing
871 cannot be considered.
872

873 ORCF does not have a minimum threshold of acceptability for the percentage for occupancy.
874 However, if the property in question has a lower occupancy rate than comparables, it may be
875 that the property is inferior in the marketplace. The lender narrative will need to explain why
876 this is occurring and what steps the Borrower is taking to make the project more competitive.
877 Also, ORCF does not put a limit on the maximum occupancy rate that can be used in the
878 appraisal. Appraisals must be based on market values. Appraisers may use whatever
879 occupancy a typical market participant would use. The appraiser's burden of demonstrating
880 the market's action grows the more they depart from market norms. At the same time, ORCF
881 expects the lender to present a loan sizing that is conservative. In cases where the appraiser
882 has assumed unusually high occupancies, ORCF expects the lender to implement a more
883 conservative assumption. The loan sizing would then be based on the lender's lower value.
884

- 885 a. **Private-Pay Rates.** Facilities with private pay as a payor source need to include
886 an analysis of the current rent roll, and how achieved rents differ from asking
887 rents. This should be taken into consideration in the rate conclusions. For
888 independent living, assisted living and memory care a comparison and
889 adjustment grid should be provided for each private-pay unit type. For skilled
890 nursing facilities, an adjustment grid is not required but the appraiser/analyst must
891 provide an analysis with a rate comparison chart to determine if the private-pay
892 nursing rates are at market levels. Use of fewer than 3 similar comparables
893 requires an explanation. At a minimum, the rent comparison will discuss building
894 ages, unit types, unit sizes, amenities, services, location, and rental concessions.
895 The narrative should provide the rationale behind the adjustments and offer
896 support in the form of market data and/or pairing analysis, when available.

897 **Advisory Note:** Many private-pay patients in nursing homes are patients with
898 short-term assets and often will convert to Medicaid later. The forecasted private-
899 pay rate must also consider the private-pay mix or census at the facility. As the

900 [private-pay rate increases, the average length of stay of the private pay patient may](#)
901 [decrease due to limitations on their private assets.](#)

- 902 b. **Medicaid Reimbursement – 223(f).** For 223(f) refinances, the appraisal will
903 include an outline of the State’s reimbursement system, discussing how
904 reimbursement rates are set, or any local peculiarities. Medicaid reimbursement
905 rates should be based on the project’s current rate, with the following exceptions:
906 i. If a firm rate change has been published and the change will occur within 6
907 months of the date of the appraisal, the new rate can be used. The
908 appraiser should acknowledge any foreseeable drop in rates.
909 ii. If the reimbursement rate includes a capital and/or financing component
910 from which a new rate can be calculated based on the proposed/required
911 repairs to be completed as part of this financing, the prospective rate can be
912 calculated and used. A Certified Public Accountant should be used to
913 determine the new reimbursement rates. This would also lead to the
914 inclusion of a sinking fund. See Production, Chapter 2.5 GG.
915 iii. Determination of the MVTAB assumes a market sale, and if the state resets
916 rates upon sale, then a new rate must be estimated. The ways these rates
917 are calculated vary from state to state. If the appraiser is not experienced in
918 making these rate determinations, they should work with an accountant
919 experienced with long-term care reimbursements within the state in which
920 the subject is located to determine the new reimbursement rates. The
921 “reset” Medicaid reimbursement rate(s) must tie back to the appraiser’s
922 forecasted operating expenses when the reimbursement system is facility-
923 specific and not cost based.

924 [**Advisory Note:** The Medicaid rate may not always be the current rate. For](#)
925 [example, some states issue quarterly rates and they may change](#)
926 [significantly quarter by quarter depending on the case mix index. If the](#)
927 [most recent quarter is used and that rate is the highest it has been in the last](#)
928 [4 quarters, the rate may be overestimated.](#)
929

- 930
931 c. **Medicaid Reimbursement – New Construction, Substantial Rehabilitation,**
932 **241(a), and Blended Rate.** For New Construction, Substantial Rehabilitation,
933 241(a), and Blended Rate loans, the estimated Medicaid rate must incorporate the
934 rate-setting methodologies used by the respective state. For rates that are
935 developed from cost-based, facility-specific systems, the Medicaid rate must be
936 reconciled to the forecasted “Medicaid-allowable” operating expenses of the
937 subject. It is not permissible to apply an un-reconciled rate to the appraiser’s
938 forecasted expenses where cost-based, project specific systems are used. Facility
939 specific, cost-based Medicaid rates developed or provided by third party experts
940 (e.g. developer, operator, or management company) must be reconciled to the
941 appraiser’s forecasted “Medicaid-allowable” operating expenses.
942 d. **Medicare Reimbursement – 223(f).** For 223(f) refinances the analysis of the
943 Medicare reimbursement rates should be based on the project’s weighted average
944 rate based on an analysis of average Resource Utilization Group (RUG) census
945 over the preceding 6 to 12 months of operations. If a firm rate increase has been

946 published and the increase will occur within 6 months of the date of the appraisal,
947 the published rate can be used when the appraiser feels this outcome is expected
948 and supported.

949 **e. Medicare Reimbursement – New Construction, Substantial Rehabilitation,**
950 **241(a), and Blended Rate.** For New Construction, Substantial Rehabilitation,
951 241(a), and Blended Rate loans, the analysis of the Medicare reimbursement rates
952 should be based on weighted market reimbursement rates for the proposed care
953 type, and supported by an analysis of average RUG census of comparables
954 offering the same type of care over the preceding 6 to 12 months. The appraiser
955 should make a concerted effort to show that the expenses forecasted for the
956 subject, match the level of care in the reimbursement rate. For projects with
957 preexisting units, the rate should be reconciled with the facility’s historical
958 weighted average rate.

959
960 **Advisory Note: RUG data is provided in Medicare cost reports. Although local**
961 **market comparable data needs to be provided, when the subject is new**
962 **construction it may be appropriate to use other newly construction facilities in**
963 **similar markets rather than using older local comparables.**

964
965 **e.f. Other Reimbursement (HMO, VA, etc.).** For other forms of reimbursement, the
966 appraisal will base the rate conclusion on an appropriate analysis of comparable
967 market data, published rates, provider agreements, and/or the subject’s historical
968 data, as applicable.

969 **f.g. Other Income:** Other income should be estimated based on market data.
970 Significant components, such as personal care/ancillary services, second occupant
971 charges, beauty shop, day care services, and other miscellaneous sources, should
972 be supported by historical or comparable market data and presented individually in
973 the report. Interest income is not to be included as it is not considered to be tied to
974 the real estate.

975
976 Fundraising revenue cannot be included in the NOI. This would not be a
977 dependable source of income and would not be available to a purchaser in the
978 event of sale of the property.

979 **g-h. Commercial Income.** If the subject contains commercial space, the forecasted
980 income from that space is to be estimated based on property history (when
981 existing) and market data. Use of fewer than three comparable commercial leases
982 requires an explanation. Small spaces, such as those leased for beauty/barber
983 shops and therapist’s rooms are not considered commercial space.

984
985 **i. Vacancy and Collection Loss (Economic Vacancy).** HUD requires that the
986 appraiser forecast a vacancy factor for the subject. Consider both a physical
987 vacancy and a collection loss allowance. These components should be separately
988 identified and supported in the report.

989
990 **Advisory Note: Collection loss in healthcare properties is primarily listed as bad**
991 **debt.**

992
993 If the physical vacancy in the market exceeds the factor selected for the subject
994 property, the appraiser must explain why the Property's performance is expected to
995 be stronger than the market. The appraiser should also address the trends that
996 would indicate a change from the current vacancy in the near future. The
997 discussion of trends should generally include:

- 998 i. Recent vacancy patterns, including any seasonal variations at the property
999 and in the market.
- 1000 ii. Turnover rates.
- 1001 iii. Economic factors (e.g., employment, supply of comparable units) that may
1002 have a long-term impact.
- 1003 iv. Changes in the supply of competitive facilities and/or units.

1004 **h-j. Expenses.** The appraiser's expense estimate should conform to the following
1005 rules: All projects should stand alone and must not reflect shared expenses from
1006 nearby projects under the same management.

- 1007 i. Categorize and provide commentary as needed to support each item. A
1008 suggested chart of accounts (expense categories) is included in the Lender
1009 Narrative Template, but this is not a mandate on how the expenses should
1010 be categorized. The goal should be to record the expenses of the subject
1011 and the comparables in a way consistent with one another and in a way that
1012 requires the least amount of subjective re-categorization from the source
1013 reports.
- 1014 ii. For existing properties, the appraisal will analyze the subject's historical
1015 operating statements. If any expense estimate used by the appraiser is
1016 lower than the historical expense, the appraiser should be particularly
1017 diligent in providing information concerning that expense estimate.
- 1018 iii. At least three expense comparable properties will be considered. The
1019 expense comparables should be included in the report and strive to:
 - 1020 a. contain approximately the same payer mix (Medicaid, Medicare,
1021 Private Pay, etc.),
 - 1022 b. have similar unit/bed capacities,
 - 1023 c. be located in a market similar to the subject,
 - 1024 d. represent the same licensed level of care (skilled nursing, assisted
1025 living, memory care, etc.).

1026 In cases where comparables with similar care mixes cannot be found, at
1027 least three expense comparables for each care type should be used.
1028

1029 **Advisory note:** The size as well as the census mix of a senior housing
1030 and/or nursing home must be considered in the selection of expense
1031 comparables. These two factors have the largest impact on variations in
1032 expenses from facility to facility. For example, it is not relevant or
1033 appropriate to forecast the expenses for an assisted living facility with an
1034 assisted living facility that is 50 percent smaller in size. It is not relevant or
1035 appropriate to compare a nursing facility with a substantial Medicare and
1036 managed care census mix to a nursing facility with substantially less
1037 Medicare and managed care patients.

1044
1045
1046
1047
1048
1049
- iv. The appraiser must indicate from which period/fiscal year the expense comparables were taken. The appraiser will adjust or trend the comparables for changes in the market over time to the effective date of the appraisal. The appraiser will describe how the adjustments were applied.
 - v. For properties with commercial space, the expenses associated with that space must be discussed and supported at least three additional expense comparables will be analyzed and considered, unless the lease is on an absolute/triple net basis whereby the tenant pays all expenses. Commercial expenses should be reflected separately from the residential expenses. The conclusion should reflect any special conditions indicated in the commercial leases that would reduce the net income of the property.

1050
1051
1052

~~vi. In states with a cost-based, facility-specific Medicaid reimbursement system, the appraiser must reconcile their operating expenses with the rules and calculations for reimbursement.~~

- 1053
1054
1055
1056
- ~~vi.~~ vi. Regarding confidential expense comparables, the appraiser may only use confidential expense comparables that are supportive and consistent with the fully disclosed comparable(s) used in the analysis. Using only confidential comparables is not allowed.

1063
1064
1065
1066

i.k. **Reserve for Replacement Reserve.** The appraiser should reflect a reserve for replacement that is supported by the market and/or historical levels. HUD has a programmatic requirement to require a reserve for replacement; however, in order to preserve the integrity of the “Market Value” called for, if the amount required by HUD differs from what the market demands, the appraiser will use the market-based amount and the Lender will revise the amount in their underwriting to meet HUD’s requirements. The Lender is not required to recapitalize the value conclusion for this revision of expenses. The Lender will however use their altered net income conclusions in the calculation of the Debt Service Criterion used for loan sizing.

1070
1071
1072
1073
1074

j.l. **Real Estate Taxes.** The appraiser must consider current assessed value, trends, and levy rates of the local jurisdiction taxing the subject property. In cases that involve new construction, at least three comparable tax properties should be considered and analyzed. The current taxes (for the immediate tax year) should be clearly stated. The appraiser should discuss how the appraised value compares to the current assessment. If a jurisdiction resets the tax assessment after a sale, the appraiser’s expense conclusions should implement the hypothetical reassessment.

1075
1076

For properties subject to tax abatement or tax exemptions, the appraisal will follow the procedures outlined in 7.5.

1077
1078
1079
1080
1081
1082
1083

k.m. **Capitalization Rate.** Under the direct capitalization method, the appraiser extracts the over-all capitalization rate from sales comparables. The methodology for estimating the comparable’s NOI should match the methodology used in developing the subject’s NOI. That is to say, if the subject’s income is prospective in nature, so the comparable’s should be; if the subject included a management fee, so should the comparable; if the subject’s expenses included reserve deposits, so should the comparable’s, etc. When extracting market capitalization rates from

1084 sale comparables, the appraiser should attempt to interview the buyer, seller, and
1085 brokers to learn their expectations of income and expenses. This is to ensure
1086 agreement between the subject's projected income/expenses and the sale
1087 comparable capitalization rates.
1088

1089 The appraisal must explain the adjustments to a comparable's NOI when deriving
1090 a capitalization rate. The appraiser should comment on the relative quality,
1091 reliability, or appropriateness of comparable's capitalization rate. The narrative is
1092 to provide pertinent discussion as to how the subject's final capitalization rate was
1093 determined.

1094 **1-n. Discounted Cash Flow (DCF).** The appraisal may use a discounted cash flow
1095 analysis or Yield Capitalization as an additional check against the direct
1096 capitalization approach above. This method can be a useful and valid analysis in
1097 situations where incomes will vary over time in a predictable way. However, due
1098 to the subjective nature of the DCF and the potential for misuse of cash flow
1099 estimates, discount rates, terminal rates, etc., ORCF will only permit this
1100 methodology to be utilized as an indicator of value in addition to other valuation
1101 methodologies. With rare exceptions, the Income Approach conclusion should not
1102 be weighted to the results of a Discounted Cash Flow Analysis.

1103 **11-o. Special Appraisal Considerations.** The appraiser should be aware of the
1104 following program restrictions:

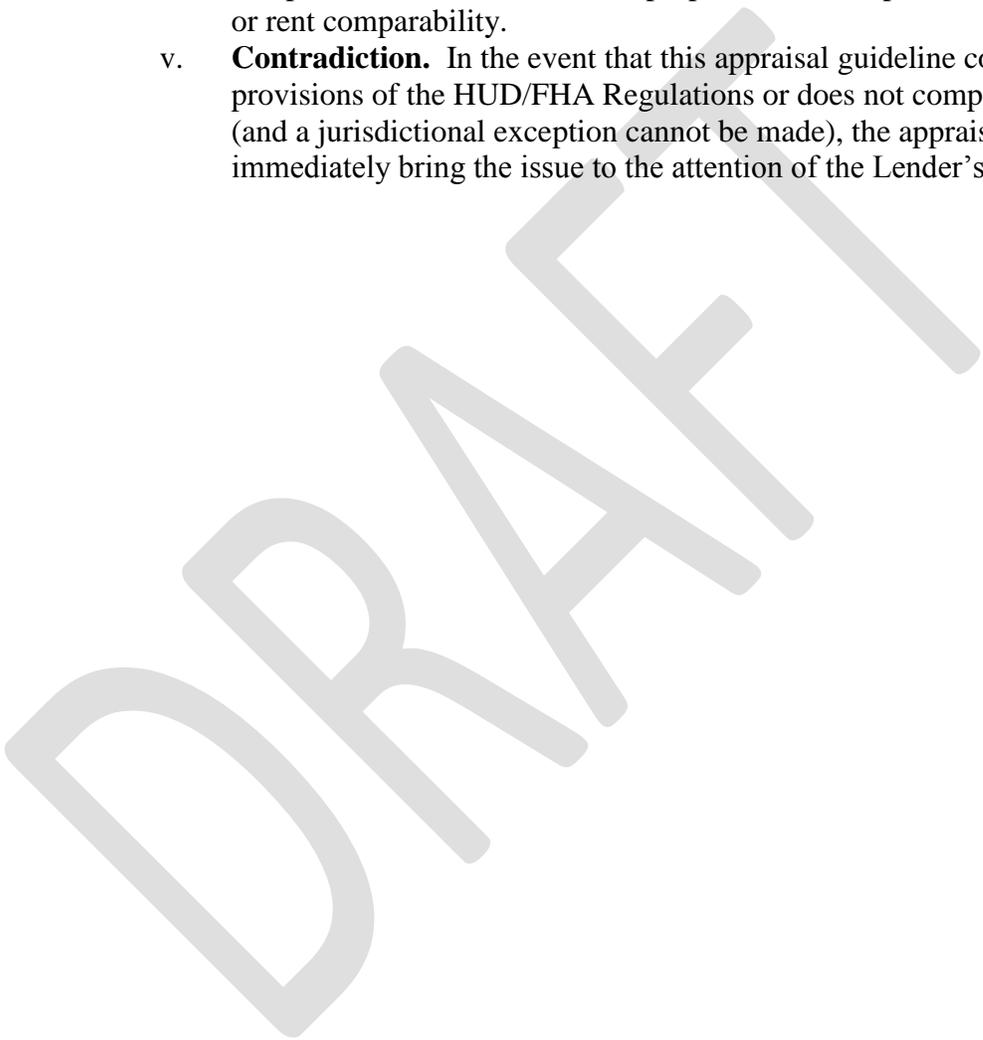

- 1105 i. **Continuum of Care Retirement Communities (CCRC's).** HUD does
1106 not insure facilities that require upfront fees or substantial down payments
1107 for occupancy. For facilities that offer services to more than one type of
1108 resident (e.g., assisted living, dementia, skilled nursing) the appraisal will
1109 need to adequately evaluate each group in terms of income, expense, and
1110 sales comparable data. If comparable data from projects of a similar
1111 resident mix is not available, the appraisal will need to include a separate
1112 analysis for each resident type. Likewise for the income and expense
1113 comparables.
- 1114 ii. **Day Care.** An eligible health care facility may provide nonresidential
1115 (outpatient) care for elderly individuals and others (e.g., persons with
1116 physical or mental disabilities) who require care during the day. To be
1117 eligible for the program, non-resident day care space may not exceed 20%
1118 of the gross floor area of the facility and non-resident day care income may
1119 not exceed 20% of gross income.
- 1120 iii. **Clinics, Medical Offices, and Similar Related Services.** Clinics, medical
1121 offices, and similar related services included in a residential care facility
1122 are to be treated as commercial space in accordance with the current ORCF
1123 instructions and limitations.
- 1124 iv. **Rent Restrictions/Rent Subsidies.** In some cases, assisted living facilities
1125 may receive subsidies and be tied to restrictions. If the property's rental
1126 rates are restricted or subsidized, the appraisal will discuss the particulars
1127 of the restriction/subsidy, including how the rates are determined, the
1128 duration of the restriction/subsidy, identify the entity responsible for
1129 monitoring the restriction/subsidy, and identify the effect on marketability

1145
1146

of the non-restricted/non-subsidized units. For unit- or project-based restrictions/subsidies, the appraisal should use the lower of the market rent conclusion and the restricted/subsidized rent in determining value, unless otherwise instructed. This may require the appraiser to cite a hypothetical condition.

Payments from Medicare, Medicaid, HMO's and Private Insurance are not considered subsidized rents. Subsidized properties cannot be used as comparables for non-subsidized properties with respect to sales, expense, or rent comparability.

- v. **Contradiction.** In the event that this appraisal guideline contradicts the provisions of the HUD/FHA Regulations or does not comply with USPAP (and a jurisdictional exception cannot be made), the appraiser will immediately bring the issue to the attention of the Lender's underwriter.

1190

A. **Lease Duration:** To be eligible, the lease term may be at any stage of a 99-year lease, so long as the lease is renewable, or have at least 10 years remaining after the maturity date of the proposed mortgage.

B. **Mortgage Amount Limitation:** HUD regulations state, “In the event the mortgage is secured by a leasehold estate rather than a fee simple estate, the value of the property described in the mortgage shall be the value of the leasehold estate (as determined by the Commissioner) which shall in all cases be less than the value of the property in fee simple” (24 CFR 232.903(a)). Compliance with this regulation will be met through the following steps:

1. The appraiser is asked to develop the Hypothetical Fee Simple Value of the Going Concern as if unencumbered by the ground lease. The lender will enter this amount on Form HUD-92264a-ORCF, (Tab MILC Page 1 – Line D.a).
2. Next the lender will enter the option to purchase price from the Lease Addendum (Form HUD-92070-ORCF), on the line that calls for the “Value of the Leased Fee” - Line C.b.(1) and Line D.b). In the rare cases where the Lease Addendum does not specify a purchase price, the hypothetical fee simple value of the land will be entered on line C.b.(1). Cases where there is a single up-front ground lease payment or where the lease payment is a token \$1, will be treated more like fee simple land ownership in that \$0 will be entered on line C.b.1. Only government entities can request waivers to not name a purchase price.

The form will automatically deduct the option to purchase price from the fee simple value before applying the prescribed loan to value percentage limitation. This procedure assumes parity between the Leased Fee Value and the option to purchase price. ~~But~~ eEven when there is not parity, HUD’s interest is covered as the loan size decreases based on how costly it will be to purchase the land.

For the Debt Service criterion on Form HUD-92264a-ORCF, the lender will include the annual ground rent under the “Land Calc” tab on the line item that says “Annual Ground Rent”.

The land value should not be included on Form HUD-92264a-ORCF. Likewise, when leased land contains pre-existing buildings that are to receive substantial rehabilitation, the contributory value of the pre-existing improvements is not to be included. The value of these items is assumed to be paid for annually by the lease payments; therefore, their value should not be included in the overall costs.

In cases where there is a single up-front ground lease payment that covers the ground rent through loan maturity, the amount of the payment may be entered in the “Land Calc” tab of Form HUD-92264a-ORCF, under additional cost. Include a note explaining what the additional cost is for. Otherwise, the processing is the same as with other ground leases.

- 1191 C. **ORCF Appraisal Review:** The ORCF review appraiser will perform a review of the ground
1192 lease that examines the following:
1193
- 1194 1. The review appraiser will analyze the lease parameters and the ground rent payment
1195 amounts. Although certain kinds of annual increases may be allowed, variable lease
1196 payments are not acceptable because they raise the risk that future payments may be too
1197 burdensome and may cause a potential default in the mortgage payments. Examples of
1198 unacceptable methods of determining variable ground rents are:
 - 1199 a. A graduated schedule of future increases on a lump sum year-by-year basis.
 - 1200 b. Cost of Living increases (waivers of this restriction will be considered if there is a
1201 cap in place to the amount of increase).
 - 1202 c. Increases based on the results of future appraisals.
 - 1203
 - 1204 2. Annual increases are acceptable when computed using any of the following three
1205 methods:
 - 1206 a. A fixed percentage of effective gross income. The percentage must remain the
1207 same throughout the term of the lease. Effective gross income shall mean the
1208 annual amount collected from all sources, less refunds.
 - 1209 b. A fixed percentage of net cash flow. The percentage must remain the same
1210 throughout the term of the lease. Net cash flow shall be the annual amount
1211 remaining after debt service payments are subtracted from net income.
 - 1212 c. A stated dollar amount per year which must remain fixed for at least 10 years more
1213 than the term of the insured mortgage.
 - 1214
- 1215 D. **Acceptability of Lease Payments:** The lease payments may not exceed market levels. The
1216 appraisal is to determine the amount of the “market” ground rent by first determining the fee
1217 simple value of the land, then presenting comparable data on ground lease returns. The market
1218 ground rent is then to be compared to the proposed ground rent. When local comparables are not
1219 available, data from comparable markets will be acceptable. The review appraiser will ensure
1220 that the ground rent amounts do not exceed market levels.
1221
- 1222 E. **Lease Provisions:** The review appraiser must review other provisions of the lease to determine
1223 that they will not restrict the successful operation of the project, keeping in mind that the
1224 provisions of the Lease Addendum, must be included in, or legally appended to, the lease. If the
1225 above conditions are met and the annual lease payments required under the lease meet the test for
1226 acceptability, the appraiser may recommend that the lease be accepted.
1227
- 1228 F. **Ground Rent during Construction:** For proposed construction under all sections of the Act,
1229 normal monthly lease payments during construction may be included in the estimated
1230 replacement cost of the project and in the certified cost, subject to the following conditions:
1231
- 1232 1. The period for which ground rent is estimated must be the same as that for which interest
1233 and other related charges are calculated, or, the estimated construction time plus two
1234 months.
1235

- 1236 2. Ground rent during construction may be entered in the replacement cost tab of Form
1237 HUD-92264a-ORCF (labeled “Warranted Price of Land”). A remark should be entered
1238 indicating that the amount includes ground rent during construction.
1239
- 1240 3. Ground rent must not be included in the base on which profit (AMPO – allowable for
1241 making non-profit projects operational) is calculated.
1242

1243 ~~G. **Ground Lease Expense:** Where the underlying land is not held in fee simple, and a facility is~~
1244 ~~subject to a ground lease, the expense analysis of the Income Approach must include the actual~~
1245 ~~ground lease expense in the estimation of total expenses, leading to the diminished estimate of net~~
1246 ~~operating income.~~
1247
1248

5.5

Tax Abatement Procedures

1249 Tax abatement/exemption herein shall mean a reduction of property taxes by the taxing authority,
1250 whether in the form of forgiveness or refund. The appraiser will investigate how long the abatement
1251 will last and whether or not the abatement will be passed on to a new owner when there is a sale. For
1252 purposes of Section 232 underwriting abatements will be classified as one of the following three
1253 types:
1254

- 1255
- 1256 1. **Type A:** Abatements that will not be inherited by a typical buyer, and abatements
1257 where there are less than 5 years of abatement remaining.
1258
 - 1259 2. **Type B:** Abatements that would be inherited by a typical buyer, where the abatement
1260 amount is level, or the exemption is complete, and lasts the term of the mortgage.
1261
 - 1262 3. **Type C:** Abatements that would be inherited by a typical buyer, but are variable in
1263 amount and/or shorter than the term of the mortgage.
1264

1265 A. **Type A Abatements:** Properties that have real estate tax abatements that would not be passed
1266 onto a typical buyer or where there are less than 5 years of abatement remaining are to be
1267 appraised and underwritten assuming full market-level tax as an expense. It will not be necessary
1268 for the appraiser to invoke a hypothetical condition for this assumption, as they will already be
1269 assuming a sale. Deciding whether or not abatements can be inherited will require an analysis of
1270 the rules that govern the abatement. These rules could show that some buyers, such as non-profit
1271 organizations, could inherit the abatement, whereas for-profit organizations could not.
1272

1273 When determining who a typical buyer of the property would be, it is inappropriate to assume a
1274 non-profit organization would be the next buyer simply because the current Borrower is a non-
1275 profit. This is not to say that there are not cases where another non-profit would be the most
1276 likely buyer.
1277

1278 While the appraised value will recognize full market taxes, the lender can recognize the tax
1279 abatement in sizing the mortgage by debt coverage, so long as the abatement lasts more than 5
1280 years.
1281

1282 **B. Type B Abatements:** For properties that have tax abatements that would be passed onto a typical
1283 buyer, AND where the abatement amount is constant or there is forgiveness of the complete
1284 amount, AND lasts the term of the mortgage, the appraiser and lender may recognize the savings
1285 in their expense conclusions both in market value and in debt coverage calculations.
1286

1287 **C. Type C Abatements:** For properties that have tax abatements that would be passed onto a
1288 typical buyer where the tax abatement is variable in amount, and/or shorter than the term of the
1289 mortgage (but longer than 5 years), the value of the abatement may be considered as follows: The
1290 appraiser will first determine the values produced by all applicable approaches, assuming full
1291 market taxes in their expense calculations. Next, the appraiser will estimate the Net Present
1292 Value (NPV) of the tax savings. The discount rate used in this calculation is to be determined by
1293 the appraiser. Below is an example of a 6-year variable tax abatement and the concluded NPV.
1294 In this example seven years have been shown for illustrative purposes but there is no tax savings
1295 in year seven.
1296

Year	2012	2013	2014	2015	2016	2017	2018
Forecasted Market Taxes	\$115,387	\$117,118	\$118,875	\$120,658	\$122,468	\$124,305	\$129,983
Actual Taxes with Abatement	\$0	\$5,856	\$11,888	\$18,099	\$24,494	\$31,076	\$129,983
Tax Savings	\$115,387	\$111,262	\$106,988	\$102,559	\$97,974	\$93,229	\$0
Discount Rate	13.0%						
NPV of Abatement	\$424,252						

1297
1298
1299 The NPV can then be added to value conclusions from each approach before concluding a
1300 final rounded value.
1301

1302 Type C tax abatements can be recognized in Debt Service criterion on the Form HUD-
1303 92264a-ORCF (maximum mortgage amount based on debt service ratio).
1304
1305

5.6

Restricted Rents

1306
1307 For loan applications that involve rent restriction from Low Income Housing Tax Credits (LIHTC) or
1308 Tax Exempt Bonds, the income and expenses are to be evaluated under two scenarios, namely with
1309 and without the rent restrictions. The two scenarios will be used as follows for loan sizing on the
1310 Form HUD-92264a-ORCF:
1311

1312 1. Loan-to-Value Criterion: In Loan-to-Value criterion of the Form HUD-92264a-ORCF,
1313 the lender is allowed to use the market value as if unencumbered by the rent restrictions.
1314 The appraisal statement of work (Section 5.3) always calls for a Market Value that
1315 incorporates all the applicable rent restrictions, therefore, whenever the Lender wishes to

1316 use an unencumbered value, they will need to expand the appraiser’s assignment to
1317 provide the second value (unencumbered) value. The appraiser will then make a
1318 hypothetical assumption that the rent restrictions do not apply. Market rent levels will be
1319 established using the normal procedures outlined in the statement of work. Expenses will
1320 also need to be reanalyzed based on the hypothetical census shift. The market analysis
1321 requirements always call for an analysis that recognizes all rent restrictions that will be in
1322 place. In order for the appraiser to produce a hypothetical unencumbered value, they will
1323 need to revisit the demand calculations to determine how well the proposed units will be
1324 received when not limited to restricted income residents. The comparable selection and
1325 the adjustments made in the sales comparison approach will also need to be revisited.
1326 If the lender is requesting a loan amount that is less than the Loan-to-Value criterion limit,
1327 the lender may simply use the Market Value that recognizes the rent restrictions and not
1328 provide the second hypothetical value as if unencumbered. This will make the appraisal
1329 assignment less complex and generally less costly.

1331 2. Debt Service Criterion – Debt Service Analysis: In calculating the NOI the lender uses for
1332 the Debt Service criterion, rent restrictions must be observed.

- 1334 A. **Expenses/Fees**: Properties with LIHTC restricted units will commonly have a higher operating
1335 expense ratio per unit than market rate properties, which may be due to increased administrative
1336 costs for tax credit compliance monitoring, and due to performing tenant income certifications
1337 and staffing to provide on-site resident services.
- 1338
- 1339 B. **Audit Fee no Longer Recognized**: With the elimination of the requirement for an audited cost
1340 certification for mortgage insurance transactions with LIHTC, assuming the ratio of loan proceeds
1341 to the actual cost of the project is less than 80 percent, the audit fee will no longer be recognized
1342 as an allowable cost in the Total Estimated Replacement Cost of Project, replacement cost tab of
1343 the Form HUD-92264a-ORCF.

5.7

Non-Profit Operations

1345 ORCF’s goal is to obtain a market value as defined within USPAP for the property. The market
1346 value is what such a facility would sell for as of the effective date of the appraisal. It is not always
1347 the mission of non-profit organizations to maximize cash flows. Potential for-profit buyers would
1348 likely modify the operations with the goal of improving cash flows in mind. Potential differences
1349 between non-profit and for-profit operators include but are not limited to staffing ratios, employee
1350 benefits packages, higher level food service, even potentially higher occupancy rates, reputational
1351 differences, etc. It is appropriate for an appraiser to adjust these and other revenues and expenses to
1352 reflect a true market rate operation (both on the revenue and expense side) in determining the value.
1353 If the appraiser believes that the operations would materially change with a market rate sale, the
1354 appraiser must factor into their analysis the additional costs and risks associated with converting a
1355 facility from the current non-profit operation to a for-profit operation (see Production, Chapter 5.3.G
1356 Hypothetical Conditions). The method for factoring in the additional costs and risks is up to the
1357 appraiser but could conceivably take the form of an increased cap rate or a reduction to value based
1358

1359 on a discounted cash flow analysis to support the value or other methods as the appraiser deems
1360 appropriate.

1361
1362 When considering modifications to the current operations, the following additional standards must be
1363 met:

- 1364 • The income capitalization analysis of the appraisal must first analyze the project's actual non-
1365 profit operations, with no market-based adjustments being made. No valuation analysis is
1366 considered in regard to this income.
- 1367 • A market based reconstructed income statement to be used for capitalization purposes will
1368 also be required. The market income must separately discuss and support any changes from
1369 the original operating statements.
- 1370 • Many non-profit organizations have established and consistent fundraising income. This may
1371 be considered as an underwriting strength however that income is not to be considered for
1372 valuation or debt coverage purposes.
- 1373 • The market's reaction to a hypothetical shift from non-profit to for-profit and the timing of the
1374 shift should be analyzed and discussed.
- 1375 • A hypothetical condition needs to be included if the valuation assumes a transition to for-
1376 profit operations.

1377
1378 Lenders need to pay particular attention to the debt coverage limits to loan sizing when working with
1379 non-profits. While the net income operating income used in valuation includes market income and
1380 expenses, the NOI for the debt cover assumes the performance of the subject own specific operator.
1381 The lender should not introduce adjustments to NOI used in the debt coverage test for any items
1382 besides reserves for replacement. The subject's historical NOI, not the appraiser's conclusion will be
1383 relied on by HUD to determine the reasonability of the NOI proposed by the lender in the debt
1384 coverage test.
