

HUD's Office of Native American Programs

In partnership with NAIHC

2015 Training Session

Environmental Review for New Housing Construction Dec. 2-3 | Portland, OR

This interactive workshop addresses the environmental review requirements of 24 CFR Part 58 as they apply to HUD-funded housing new construction activities. Participants will learn about the specific requirements that apply to housing construction, including NEPA and the other related laws and authorities, and how to evaluate and address them in the environmental review record, from project planning through HUD approval and release of funding. Participants will work with a specific project case study to develop a completed Environmental Assessment, enabling them to learn and then use the new knowledge they have gained. The session will wrap up with a discussion of key stumbling points and environmental review best practices.
