

CREATING XML FILE

The XML generator tool is developed to help the users in creating XML file for the Bulk Scheduling process. This is a standalone tool developed on Microsoft Access.

Before creating the XML file, please make sure that the input file for the Bulk Scheduling is an output excel spreadsheet created under the Scheduler module. The XML generator tool checks for the mandatory fields for the bulk scheduling process and does a data validation before uploading the file. In case of a different file format and/or missing data the following message will pop up.

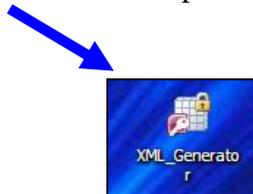

The mandatory fields for the bulk scheduling are:

- Inspection ID
- Inspector ID
- Schedule Date
- Schedule Time

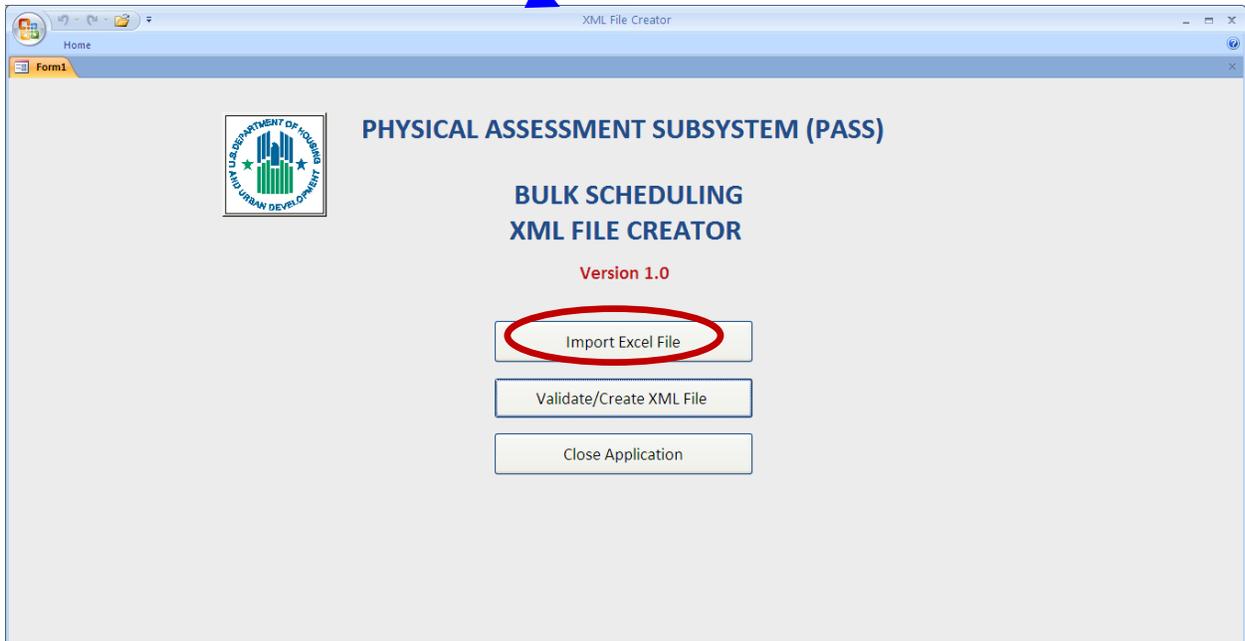

To generate a XML file:

Please make sure that the XML generator tool is installed on your machine. If not, then request for the tool that can be send through email and save it on your desired location preferably on the desktop.

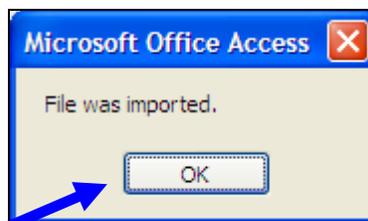

- Click on the “XML_Generator” icon to open the XML generator tool.

- The “XML File Creator” window will open.

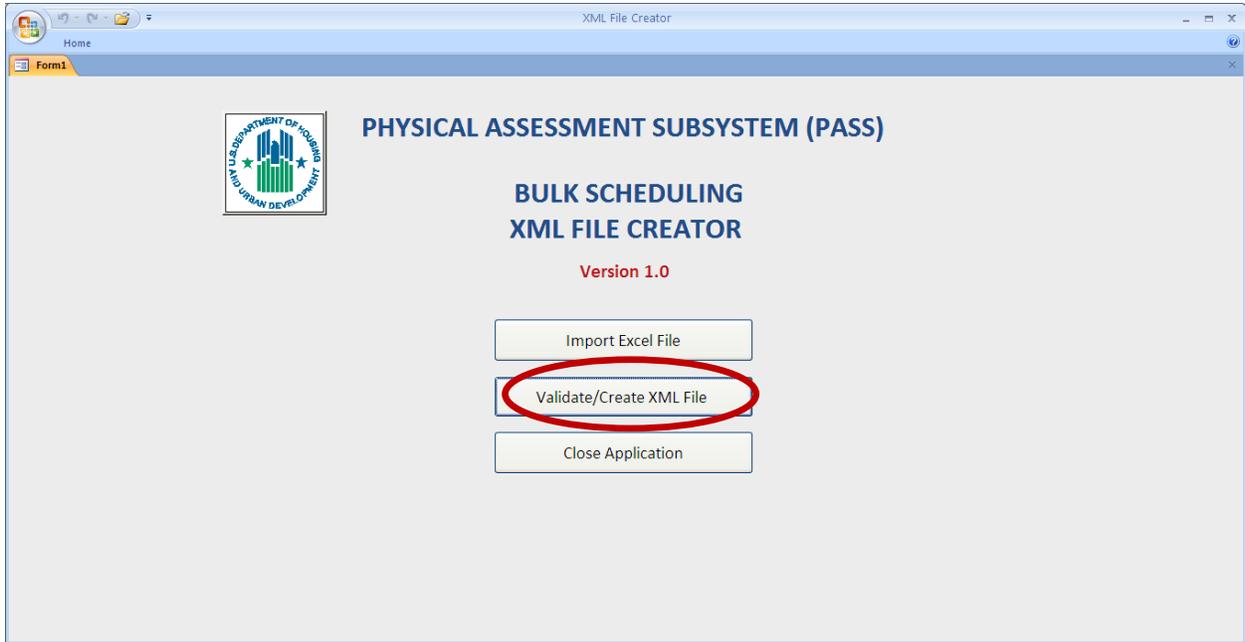

- Click on the “Import Excel File” button to import the excel file. A file imported message will pop up.

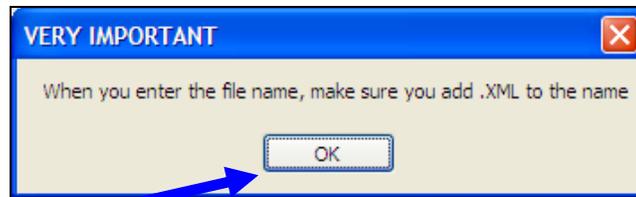

- Click OK.

XML GENERATOR

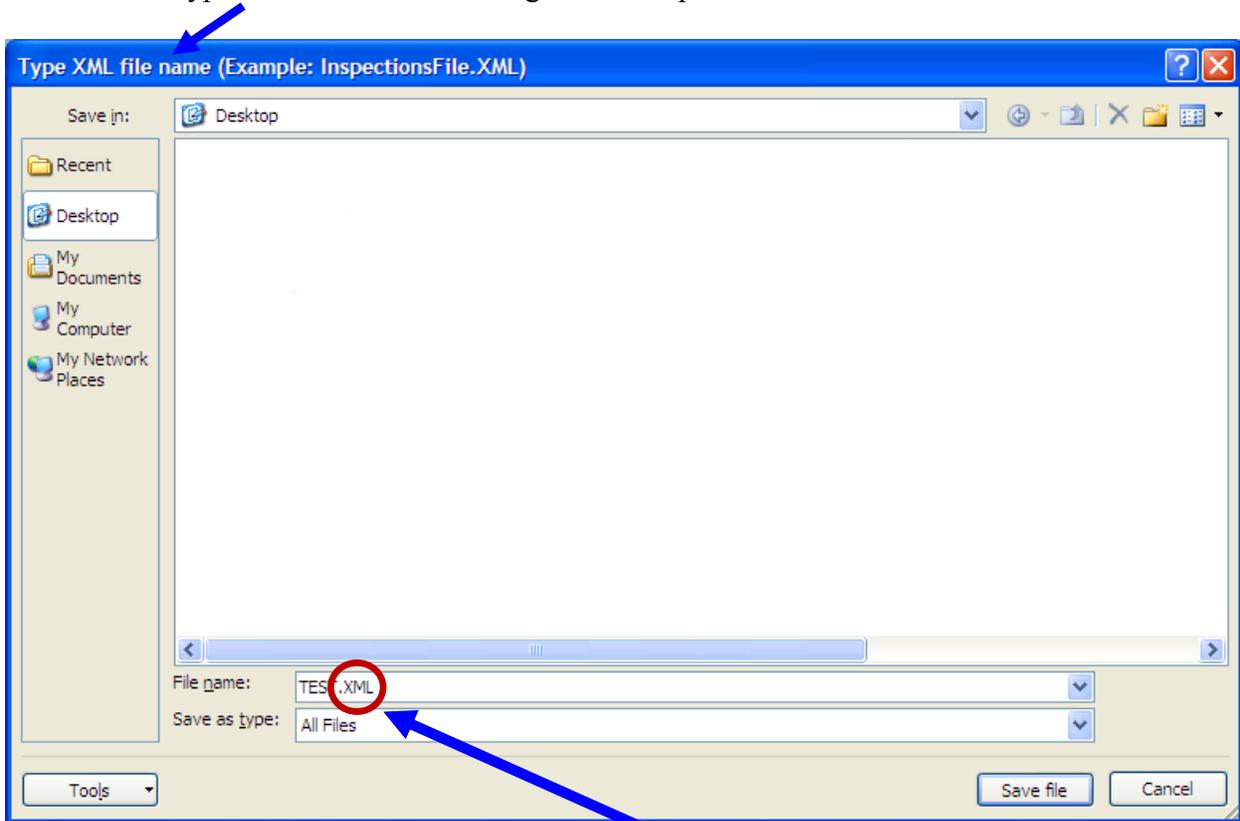

- Click on the “Validate/Create XML File” button.
- The following message will pop up

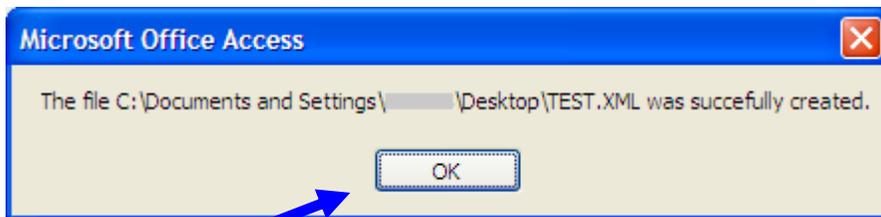

- Click OK.

- The “Type XML file name” dialog box will open.

- Browse to the location where you want to save the file.
- Type the file name in the “File name” box and add **.XML** to the file name.
- Click on the “Save file” button.

A message will pop up confirming the XML file creation.

- Click OK.

The XML file will be created and saved on the selected location.

XML GENERATOR

- Click on the “Close Application” button to exit.
